

The 2007 HopeFoil Project Arrivals

The horses in this award-winning class are rescued Premarin foals. Premarin is a hormone replacement drug made from the urine of pregnant mares. Medicine Horse Program, in partnership with corporate sponsor MyChelle Dermaceuticals and corporate contributor Natural Heath International, rescues the foals. We use them to teach a class specifically designed for depressed and anxious teens. The teens work with trained therapists and horse handlers to help gentle the foals. In the process, both foal and teen are healed.

The 2007 class of foals, listed below, will be arriving at Medicine Horse the third week in October. Please join us in welcoming the new arrivals!
